```csharp
public sealed class Singleton
{
    private static Singleton m_oInstance = null;
    private int m_nCounter = 0;

    public static Singleton Instance
    {
        get
        {
            if (m_oInstance == null)
            {
                m_oInstance = new Singleton();
            }
            return m_oInstance;
        }
    }

    public void DoSomething()
    {
        Console.WriteLine("Hello World po raz
            {0}!", m_nCounter++);
    }

    private Singleton()
    {
        m_nCounter = 1;
    }
}
```
